MANUALS GUIDES EVENTS

 

SOFTWARE UPDATES | Volume 1, 2021

APPLICATION	VERSION
SAACR_Raw2Data	5.20
SAAREcorder	7.91
ShapeArray™ Viewer	3.02
SAACR_FileGenerator	3.32
SAACR_DataChecker	1.44

Listed above are the most recent versions of our software. Please click [here](#) to update.

UPDATES INCLUDE:

SAACR_Raw2Data:

Features/Improvements:

- Added support for SAAV Extend data files
 - Raw2Data will process a ShapeArray with a lift with a correct site file.

- The output files will list the ShapeArrays in the specified order.
- The output matlab file will contain the new fields for ShapeArray™ Viewer.
- The process will create SAALift calibration files for each lift found in the site file.
- The application will show the user the message when ShapeArray Data .dat files are found but do not exist within the project.
- The application will add the new files to the end of the list of files in the File Selection window.
- Adjustments applied to base ShapeArray are automatically applied to the lifted ShapeArrays.

Fixes:

- Fixed an issue that prevented super arrays from processing during an auto conversion.
 - Fixed an issue that prevented some data files saved by Worldsensing loggers from converting properly.
 - Fixed an issue that removed ShapeArray readings, which only had zero readings for segments that were designated as slaved or absent. These readings are now kept.
 - Fixed an issue that prevented convergence ShapeArrays from processing if the data file was 0s.
-

SAARecorder:

Features/Improvements:

- Added support for SAAV Extend ShapeArrays
 - When using a .dat file for installation verification, the user is prompted for a site file if the found calibration file is part of an extended ShapeArray.
 - New Menu item SAA Setup → Create "Lifted Site File"
 - The menu option is unavailable when a connectable ShapeArray is not being used.
 - An existing site file found with the same filename in the chosen directory will be updated to include the connectable ShapeArray.

- User is prompted to a file location for the "Lifted Site File" as soon as one is detected while starting SAARecorder.

Fixes:

- Fixed a crash that would occur if the wireless delay value on the 'Connection' tab page was changed to an incorrect value.
- Fixed an issue with saving text data from SAAV Installation Verification tool not giving tilts that were consistent with the graphical tilts in some cases.
- Made the voltage/current dialogue available from the ShapeAccelArray Startup window more consistent with the voltage/current dialogue available from the diagnostics section of SAARecorder.
- Removed legacy applications from the installation of SAARecorder
 - ReadAntiRotationAngles
 - RSAFileChecker
 - SAA_Concat
 - SAAConcatHoriz
 - SoloBug_SAARecorder
- Changed the references to octets when searching for newer model ShapeArrays over a Bluetooth connection.
- Fixed an issue that prevented some customers from being able to transfer a ShapeArray into low power mode using an older 232/FPU interface.
- Fixed an issue with calibration file sometimes not getting updated correctly for a convergence ShapeArray, when data is converted using Raw2data.
- Modified to power down interface power to ShapeArray (if supported by the interface) when an error occurs in the communications diagnostics test.
- Updated the popup message if there was a problem connecting to a Bluetooth device.
- Fixed an issue that would cause the COM port checkboxes on the 'Connection' tab to remain active when in wireless mode.
- Changed the title of the 'Using Serial-to-Ethernet Converter' checkbox on the 'ShapeAccelArray Startup' window to 'Wireless'.
- Fixed search and basic test functions for ShapeArrays in low power mode.
- A message about transitioning into AIA mode is displayed if a low power ShapeArray is being used when the 'Quick Save / RECORD DATA' button is pressed.
- Fixed an issue that prevented convergence ShapeArrays from processing if the data file was 0s.

ShapeArray™ Viewer:

Features/Improvements:

- Changed the name of the application from SAAView to ShapeArray™ Viewer.
- Updated the application to support SAAV Extend ShapeArrays.
 - Added a new temporary adjustment to preview the cumulative displacement of each ShapeArray after a lift has been applied by using the previous shape as an offset.
 - SAAV Extend ShapeArrays indicate how many lifts they have in the main window.

Fixes:

- Changed the azimuth graph to set the orange elevation selection line to be 15% from the top of the ShapeArray if that elevation line was previously saved below or above the range of available ShapeArray elevation data.
-

FileGenerator:

Features/Improvements:

- Added support for SAAV Extend ShapeArrays
 - FileGenerator now has an option to load a "Lifted Site File" to get all of the serial numbers in the SAAV Extend ShapeArray.
 - Extended ShapeArrays will now be saved to new raw data files after each lift.

Fixes:

N/A

DataChecker:

Features/Improvements:

- Added the ability to open a data file that was captured with a lifted SAAV
- Extend ShapeArray.

Fixes:

- Fixed an issue that would require users to save changes made to files that were no longer opened in the application.
 - Fixed an issue that caused the Raw Data window to show incorrect temperatures for newer SAAV ShapeArrays.
 - Fixed an issue that would sometimes hide single low readings in data sets with lots of data.
-

HAVE SOFTWARE FEEDBACK FOR US?

Let us know what you think! We would love to hear from you about your experience with our software.
