The first hotfix release of software in 2021, bundled as 2021.01.1, contains all of the code necessary to work with our newest product offering SAAV Extend.

This release fixes a critical issue that prevented users from converting data if they had installed a base SAAV Extend along with lift extensions as an initial installation.

UPDATES INCLUDE:

SAACR_Raw2Data:

Fixes:

- Fixed an issue that prevented Raw2Data from processing data if the first reading in the project is a SAAV Extend base array connected to lift extension segments, rather than a SAAV Extend base array only.
